

Injuv[®] with Glucosamine

PureGels[®] Injuv[®] with Glucosamine provides dual support for normal functioning of joints, cartilage, and connective tissue, and promotes skin health. The connection between healthy joints and skin is defined by the powerful synergy of Glucosamine Hydrochloride (HCl) and Injuv[®], containing natural Hyaluronic Acid (HA).*

Glucosamine occurs naturally in the body and declines with age. It maintains healthy structure and function of joints, promotes cartilage growth, and strengthens connective tissue. Our Glucosamine Hydrochloride (HCl) is highly purified and provides more absorbable glucosamine content than Glucosamine Sulfate.*

Natural HA in Injuv[®], a key building block of joint tissue, provides supplementary joint support. A patented process unique to Injuv[®] yields a low molecular weight HA, which facilitates superior absorption. HA hydrates the skin's cellular matrix from the inside out and strengthens internal structure in all layers of skin, cartilage, joint, and connective tissue. HA may aid in wound healing and diminish the severity of scars, breakouts, and fine lines.*
